

# TEKS®

## Self-Drilling Fasteners

Preferred most by electrical, decking, HVAC and metal building contractors.

### Applications

- Stitch roof deck and wall panel sidelaps.
- HVAC, electrical trim accessories to steel framing.
- Residential steel frame construction.
- Brick ties to steel framing.
- Track to stud and stud splicing.
- Hat channel to stud.

### Product Features

- Sharp convex drill point has precise cutting edges to improve drill performance with less effort.
- Non-walking point provides fast material engagement.
- Unique point to thread design extrudes the metal preventing stripout.
- Point to thread design maximizes pullout performance and minimizes backout.
- Four head styles available to handle various applications.
- Climaseal® finish provides excellent corrosion resistance and lower tapping torque.

### Product Specifications

Diameter.....#6, #8, #10, #12 and 1/4  
 Thread Form.....6-20  
                           8-18  
                           10-16, 10-24  
                           12-14  
                           1/4-14  
 Head Style.....#6: #2 Phillips Pan  
                           #8: 1/4" HWH; #2 Phillips Pan  
                           #10: 5/16" HWH; 5/16" HWH with Serrations;  
                           #2 Phillips Pan; #2 Phillips Oval  
                           #12: 5/16" HWH  
                           1/4: 5/16" HWH  
 Drill Point.....Teks 1  
                           Teks 2  
                           Teks 3  
 Finish.....#6, #8, Electro-zinc  
                           #10, #12 and 1/4 Climaseal

### Head Styles

Hex Washer Hex

Oval Head

Pan Head

Hex Washer Head with Serrations

### Approvals and Listings

Factory Mutual (J.I. 2 X 9A2 AM), ICC ER-3056, ICC ESR-1976

## Selector Guide

#12	1	432	703	753	1018	1452	-	-
1/4	1	511	849	885	1244	1764	-	-

## Installation Guidelines

- A standard screwgun with a depth sensitive nosepiece should be used to install TekS. For optimal fastener performance, the screwgun should be a minimum of 4 amps and have a RPM range of 0-2500.
- Adjust the screwgun nosepiece to properly seat the fastener.
- New magnetic sockets must be correctly set before use. Remove chip build-up as needed.
- The fastener is fully seated when the head is flush with the work surface.
- Overdriving may result in torsional failure of the fastener or stripout of the substrate.
- The fastener must penetrate beyond the metal structure a minimum of 3 pitches of thread.
